Problem 1

min lax-bl2+1x1, YER" DER" AER" rank(A)=n 写成标准也从代形式

min $|y-b|^{\frac{1}{2}} + |x|$, sit y- AX =0

 $\angle (x,y,u) = |y-b|_{2}^{2} + |x|_{1} + u^{T}(y-Ax)$

g (u) = min | y-b|2 + |x|, + uT (y-Ax) = min { 1y-b12 + uTy } + min { 1x1, - uTAx}

 $\frac{\partial (y-b)^{T}(y-b) + u^{T}y}{\partial y} = 2y - 2b + u = 0 \Rightarrow y = b - \frac{4}{2}$

 $\min_{y} \frac{1}{2} \frac{1}{|y-b|^2} + u^T \frac{1}{2} \frac{1}{2} + u^T \frac{1}{2} \frac{1}{2} = u^T \frac{1}{2} - \frac{1}{4} \frac{1}{|u|^2}$

 $\min \left\{ |XI, - u^T A \times \right\} = -\max \left\{ |u^T A \times - I \times I, \right\} = -\int_{-\infty}^{\infty} (u^T A)$

 $=-I_{\{v: |v|_{\infty} \leq i\}}(u^{T}A)$ $\not\equiv \phi, f: x \rightarrow |x|,$

9(u) = uTb- 7 |u/2- Izv: |v/a = 1} (uTA)

引驰: 抱钗购装轭函钗星军收函农工 f(x)=11x11

in f* (y) = sup {yTx -11x11}

① 若11 y 1 → >1, 则 母云 c 凡 11 元 11 € 1 使名 y 元 >1 取 x=tz f*(y)= Supit(y=-112)) /2+> ~ f*(y) > ~

② 若
$$\|y\|_X \le 1$$
 $\forall x, y^T x \le \|x\| \|y\|_X$ $\Rightarrow \forall x : y^T x - \|x\| \le 0$ $\Rightarrow x = 0$ roof $f^*(y)$ roal $f^*(y)$ roal

对图问题: maximize glu)

Problem 2

$$\max_{X} \frac{1}{|C^{T}X - \alpha|^{2}}$$
 $x_{1} c \in R_{1}^{n} b \in R_{2}^{m} d \lambda \in R_{2}^{n} A \in R_{2}^{m \times n} rank (A) = n$
 $s.t \quad |A \times -b|_{2} \leq \lambda$

旨成标况与优化的形式 s.t [Ax-b], -1 ≤0

$$L(x, u) = |c^{T}x - d|_{2}^{2} + u(|Ax - b|_{2}^{2} - \lambda^{2})$$

$$g(u) = \min_{x} |c^{T}x - d|_{2}^{2} + u(|Ax - b|_{2}^{2} - \lambda^{2})$$

$$\frac{\partial L}{\partial x} = 2c(c^{T}x - d) + u^{2}A^{T}(Ax - b)$$

$$cc^{T}x - cd + uA^{T}(Ax - b) = 0$$

KK OCH x7(CCT + UATA)X x +0. ATx +0 Ex >0 多旦当 X-10 时 取发号

tox (ccT+UATA) 也定 好不通

$$\begin{array}{ll} u \Rightarrow 0 & \forall x \\ \chi^{T}(cc^{T} + uA^{T}A)x & cc^{T} + uA^{T}Ax = cd + uA^{T}b \\ = (c^{T}x)^{T}(c^{T}x) + u(ax)(ax) \geq 0 \\ \chi \neq 0. \ A^{T}x \neq 0 \ \forall x \geq 0 \end{array}$$

$$\begin{array}{ll} (cc^{T} + uA^{T}A)x = cd + uA^{T}b \\ \vdots \partial_{x} \chi_{x} = (cc^{T} + uA^{T}A)^{T}(cd + uA^{T}b) \end{array}$$

 $g(u) = \left[c^{T} x_{0} - d \right]_{2}^{2} + u \left(|A x_{0} b|_{2}^{2} - \lambda^{2} \right)$ $= x_{0}^{T} \left(|cc^{T} + u A^{T} A| \right) x_{0} - 2 \left(|cd + u A^{T} b| \right)^{T} x_{0} + dd + u b^{T} b - \lambda^{2} u$ $= -\left(|cd + u A^{T} b| \right)^{T} \left(|cc^{T} + u A^{T} A| \right)^{-1} \left(|cd + u A^{T} b| \right) + dd + u b^{T} b - \lambda^{2} u$ $u = 0 \text{ inf}, g(u) = \min_{x \in \mathbb{R}^{N}} \left| |c^{T} x - d||_{2}^{2} = 0$ $\exists u > 0 \text{ inf} g(u) \neq 0$ $\exists u > 0 \text{ inf} g(u) \neq 0$

对偶可题 maximze glu) Sit U>0
